SAMPLE

Questions

- 1. What correction is needed in the sentence regarding a CBP Officer notifying the Office of Foreign Operations?**
 - A. Change to carry to for carrying**
 - B. Change are to is**
 - C. Change coordination to coordinating**
 - D. No correction is necessary**
- 2. What legal authority do Border Patrol Agents possess concerning arrests?**
 - A. They can only arrest individuals for traffic violations**
 - B. They can arrest individuals suspected of immigration violations**
 - C. They cannot make any arrests**
 - D. They can arrest individuals for any federal crime**
- 3. In the context of two officers completing a task, if Officer K is faster, how would they work together to finish the task?**
 - A. Faster together than separately**
 - B. Slower together than separately**
 - C. Always equal to slower officer's time**
 - D. Can never finish together**
- 4. If you want to determine how long it takes to travel a certain distance at a specific rate, which equation would you use?**
 - A. Distance x Rate**
 - B. Distance / Time**
 - C. Distance / Rate**
 - D. Rate + Time**
- 5. What voice is indicated by "She took; she was taking"?**
 - A. Active**
 - B. Passive**
 - C. Indicative**
 - D. Imperative**

- 6. In terms of accountability, how do accurate records serve the Border Patrol?**
- A. By tracking the location of agents only**
 - B. By documenting compliance and performance**
 - C. By reducing the number of reports needed**
 - D. By managing public perception**
- 7. Which sentence accurately exemplifies correct grammar and formal report standards?**
- A. The impact of this training requirement will be measured by the number of new CBP Officers who successfully complete the probationary period.**
 - B. The impact that this training requirement has will be measured by the number of new CBP Officers who successfully complete the probationary period.**
 - C. The impact of this training requirement will be measured by the number of new CBP Officers which successfully complete the probationary period.**
 - D. The impact that this training requirement has will be measured by the number of new CBP Officers which successfully complete the probationary period.**
- 8. What is the product of 6.021 and .4?**
- A. 2.4084**
 - B. 2.427**
 - C. 2.05**
 - D. 2.612**
- 9. What is the total price paid by an agency for 100 printers, knowing every 20th printer costs 40% less?**
- A. 22000**
 - B. 20800**
 - C. 22000 - 880**
 - D. 21000**

10. What could be a consequence for someone caught crossing the border illegally?

- A. Celebration and rewards**
- B. Possible deportation, fines, or criminal charges**
- C. Guaranteed residency**
- D. No action taken**

Explanations

SAMPLE

1. What correction is needed in the sentence regarding a CBP Officer notifying the Office of Foreign Operations?

A. Change to carry to for carrying

B. Change are to is

C. Change coordination to coordinating

D. No correction is necessary

In the context of grammar, the choice to change "are" to "is" is often necessary when addressing subject-verb agreement, particularly when the subject of the sentence is singular. In this specific case, if the subject being referred to is singular, then "is" must be used to maintain correct grammatical structure. Using "is" ensures that the sentence reflects proper tense and agreement, as a singular subject must be paired with a singular verb. This change clarifies the action being performed and ensures that the sentence is coherent and correctly conveys its intended meaning. Other options may aim to resolve different grammatical issues, but in the case of subject-verb agreement, ensuring that singular subjects are matched with singular verbs is crucial for clarity and correctness in writing.

2. What legal authority do Border Patrol Agents possess concerning arrests?

A. They can only arrest individuals for traffic violations

B. They can arrest individuals suspected of immigration violations

C. They cannot make any arrests

D. They can arrest individuals for any federal crime

Border Patrol Agents have the legal authority to arrest individuals suspected of immigration violations because their primary mission is to enforce immigration laws at and between the borders of the United States. This authority includes the ability to apprehend individuals who are unlawfully present in the country or suspected of violating immigration statutes. This power is rooted in the Immigration and Nationality Act, which grants agents specific enforcement responsibilities. While they possess certain powers related to immigration, their capability to arrest is not boundless; it is specifically linked to immigration-related offenses rather than general criminal activity. Thus, the focus on immigration violations underscores the vital role Border Patrol Agents play in maintaining border security and enforcing immigration laws. Other choices, such as those suggesting limited authority or an outright inability to make arrests, fail to capture the established role and responsibilities of Border Patrol Agents as designated by federal law.

3. In the context of two officers completing a task, if Officer K is faster, how would they work together to finish the task?

- A. Faster together than separately**
- B. Slower together than separately**
- C. Always equal to slower officer's time**
- D. Can never finish together**

When two officers collaborate on a task, the efficiency of their combined efforts often exceeds the sum of their individual outputs, particularly if one officer is notably faster. This scenario occurs because the faster officer can lead or streamline the process, potentially helping the slower officer maintain a better pace or clear obstacles more rapidly. By working together, they can improve overall communication and coordination, which typically enhances productivity. The rationale for collectively being faster lies in the synergy that results from teamwork, where each officer contributes their strengths. In contrast, options that suggest a slower pace or that they would always follow the slower officer's time underestimate the benefits of collaboration and the potential for mutual support during the task. Therefore, the conclusion that they would be faster together than if each operated alone reflects an understanding of effective teamwork and productivity dynamics.

4. If you want to determine how long it takes to travel a certain distance at a specific rate, which equation would you use?

- A. Distance x Rate**
- B. Distance / Time**
- C. Distance / Rate**
- D. Rate + Time**

To determine how long it takes to travel a certain distance at a specific rate, using the equation that relates distance, rate, and time is essential. The formula you would use is: $\text{Time} = \text{Distance} / \text{Rate}$. This equation derives from the fundamental relationship among these three variables. Distance represents how far you travel, rate indicates the speed at which you travel, and time is the duration of travel. By dividing the total distance by the travel rate, you can calculate the amount of time needed to cover that distance. This understanding is foundational in both physics and practical scenarios involving travel, enabling accurate planning and estimation of travel durations based on varying rates and distances. Using distance multiplied by the rate, or combining rate and time with addition, will not yield the time taken for travel, and dividing distance by time would result in an incorrect computation. Thus, the most accurate way to ascertain the time taken for travel given distance and rate involves utilizing the division of distance by rate.

5. What voice is indicated by "She took; she was taking"?

- A. Active**
- B. Passive**
- C. Indicative**
- D. Imperative**

The phrase "She took; she was taking" indicates the active voice because the subject of the sentences, "she," is performing the actions described by the verbs "took" and "was taking." In active voice constructions, the subject is directly responsible for the action, which is clearly illustrated here as "she" is the doer of the action in both instances. The active voice emphasizes the subject's role in the action, making the sentences straightforward and dynamic. In contrast, other voices like passive would focus on the action being received by the subject rather than performed by it, indicative denotes a mood that expresses statements of fact, and imperative would be used for commands or requests. This distinction helps clarify the nature of the sentence construction being examined.

6. In terms of accountability, how do accurate records serve the Border Patrol?

- A. By tracking the location of agents only**
- B. By documenting compliance and performance**
- C. By reducing the number of reports needed**
- D. By managing public perception**

Accurate records play a crucial role in ensuring accountability within the Border Patrol by providing a comprehensive documentation of compliance with regulations and performance metrics. These records help to track the actions, decisions, and activities of agents, which is essential for oversight and evaluation. By having a clear record of operations, the Border Patrol can demonstrate adherence to laws and policies, allowing for transparency in their processes and fostering trust with the public and government entities. Moreover, this documentation is vital for assessing the effectiveness of various initiatives and strategies employed by the Border Patrol. It supports internal reviews, performance evaluations, and can be utilized in training sessions to enhance future operations. Without accurate records, it would be significantly more challenging to hold individuals and the organization accountable for their actions, thereby undermining their operational integrity and public confidence.

7. Which sentence accurately exemplifies correct grammar and formal report standards?

- A. The impact of this training requirement will be measured by the number of new CBP Officers who successfully complete the probationary period.**
- B. The impact that this training requirement has will be measured by the number of new CBP Officers who successfully complete the probationary period.**
- C. The impact of this training requirement will be measured by the number of new CBP Officers which successfully complete the probationary period.**
- D. The impact that this training requirement has will be measured by the number of new CBP Officers which successfully complete the probationary period.**

The chosen sentence exemplifies correct grammar and adheres to formal report standards by clearly stating the impact of the training requirement in a straightforward manner. It selects appropriate grammatical structures and ensures clarity in conveying the intended message about measuring the impact based on a specific criterion—new CBP Officers successfully completing the probationary period. The sentence uses "impact of" effectively, maintaining a direct relationship between the subject and the action being described. Additionally, it correctly employs "who" to refer to the new officers, aligning with standard usage in defining a group of people. This choice contributes to the formal tone expected in report writing. In contrast, the other sentences either introduce unnecessary complexity or use incorrect pronouns for referring to people. For instance, the use of "which" to refer to officers is incorrect, as "which" is typically reserved for objects or things, not individuals. The addition of "that" in other options complicates the sentence structure without enhancing clarity. Therefore, sentence A stands out as the most effective choice for conveying the intended message concisely and correctly.

8. What is the product of 6.021 and .4?

- A. 2.4084**
- B. 2.427**
- C. 2.05**
- D. 2.612**

To find the product of 6.021 and 0.4, you multiply the two numbers directly. When you perform the multiplication: $6.021 \times 0.4 = 2.4084$. This calculation shows that the correct product is indeed 2.4084, which matches the first option. To clarify this further, it's important to understand how multiplication works with decimal numbers. The decimal point in 0.4 indicates that the product will also be a decimal. Since 0.4 is less than 1, you can expect the result to be less than 6.021. The precision of the calculation maintains the decimal places correctly, leading to the correct final answer. The other options represent calculations that do not yield the correct product when multiplying these specific numbers, indicating a misunderstanding of basic multiplication involving decimals, or they could simply be results from different operations or numbers.

9. What is the total price paid by an agency for 100 printers, knowing every 20th printer costs 40% less?

A. 22000

B. 20800

C. 22000 - 880

D. 21000

To determine the total price paid by the agency for 100 printers, it's important to first calculate the cost of the regular printers and then account for the discounted printers. If we assume that the regular price of each printer is a certain amount (let's call it P), then for 100 printers, the cost would originally be 100P. However, every 20th printer is sold at a 40% discount. This means for every batch of 20 printers, one printer will cost 60% of the original price (since $100\% - 40\% = 60\%$). Thus, the cost for each of these 20-printer groups is: - 19 printers at full price: $19P$ - 1 printer at a discounted price: $0.6P$ The total for one group of 20 printers becomes: $19P + 0.6P = 19.6P$. Since there are 100 printers, this means there are 5 groups of 20 printers. Therefore, the total cost for all 100 printers is: $5 * 19.6P = 98P$. If we assume a base price for P, the total can be computed. If the

10. What could be a consequence for someone caught crossing the border illegally?

A. Celebration and rewards

B. Possible deportation, fines, or criminal charges

C. Guaranteed residency

D. No action taken

The consequence for someone caught crossing the border illegally typically involves serious legal repercussions, which is why the correct choice reflects the possible outcomes such as deportation, fines, or criminal charges. When individuals are apprehended for illegal entry into a country, they may face immediate removal from that country, which is known as deportation. In addition to deportation, authorities may impose financial penalties in the form of fines. Furthermore, depending on the circumstances, individuals may also face criminal charges, especially if they have previously been deported or if they are found to be engaging in other illegal activities while attempting to cross. This system of consequences serves as a deterrent against illegal crossings and upholds the nation's immigration laws.
