Introduction

Preparing for a certification exam can feel overwhelming, but with the right tools, it becomes an opportunity to build confidence, sharpen your skills, and move one step closer to your goals. At Examzify, we believe that effective exam preparation isn't just about memorization, it's about understanding the material, identifying knowledge gaps, and building the test-taking strategies that lead to success.

This guide was designed to help you do exactly that.

Whether you're preparing for a licensing exam, professional certification, or entry-level qualification, this book offers structured practice to reinforce key concepts. You'll find a wide range of multiple-choice questions, each followed by clear explanations to help you understand not just the right answer, but why it's correct.

The content in this guide is based on real-world exam objectives and aligned with the types of questions and topics commonly found on official tests. It's ideal for learners who want to:

- Practice answering questions under realistic conditions,
- Improve accuracy and speed,
- Review explanations to strengthen weak areas, and
- Approach the exam with greater confidence.

We recommend using this book not as a stand-alone study tool, but alongside other resources like flashcards, textbooks, or hands-on training. For best results, we recommend working through each question, reflecting on the explanation provided, and revisiting the topics that challenge you most.

Remember: successful test preparation isn't about getting every question right the first time, it's about learning from your mistakes and improving over time. Stay focused, trust the process, and know that every page you turn brings you closer to success.

Let's begin.

How to Use This Guide

This guide is designed to help you study more effectively and approach your exam with confidence. Whether you're reviewing for the first time or doing a final refresh, here's how to get the most out of your Examzify study guide:

1. Start with a Diagnostic Review

Skim through the questions to get a sense of what you know and what you need to focus on. Your goal is to identify knowledge gaps early.

2. Study in Short, Focused Sessions

Break your study time into manageable blocks (e.g. 30 – 45 minutes). Review a handful of questions, reflect on the explanations.

3. Learn from the Explanations

After answering a question, always read the explanation, even if you got it right. It reinforces key points, corrects misunderstandings, and teaches subtle distinctions between similar answers.

4. Track Your Progress

Use bookmarks or notes (if reading digitally) to mark difficult questions. Revisit these regularly and track improvements over time.

5. Simulate the Real Exam

Once you're comfortable, try taking a full set of questions without pausing. Set a timer and simulate test-day conditions to build confidence and time management skills.

6. Repeat and Review

Don't just study once, repetition builds retention. Re-attempt questions after a few days and revisit explanations to reinforce learning. Pair this guide with other Examzify tools like flashcards, and digital practice tests to strengthen your preparation across formats.

There's no single right way to study, but consistent, thoughtful effort always wins. Use this guide flexibly, adapt the tips above to fit your pace and learning style. You've got this!

Questions

SAMPLE

1. Which line is part of The Chemical Corps Song's chorus?

- A. We Proudly Serve the Land We're Fighting For.
- B. We are the DRAGONS of the Battlefield
- C. We Rule the Battle through the elements
- D. DRAGON Soldiers of the Battlefield

2. In MARCH, what does the C represent?

- A. Compression
- B. Circulation
- C. Contusion
- D. Cranial Pressure

3. In PAWS, what does the A represent?

- A. Anti-Inflammatory
- B. Anesthesia
- C. Airway Assistance
- D. Antibiotics

4. Who is the Vice President of the United States?

- A. Honorable Pete Hegseth
- B. Honorable JD Vance
- C. Honorable Daniel Driscoll
- D. President Donald Trump

5. Recovery Drills stretch #7 is which stretch?

- A. Single Leg Over
- B. Groin Stretch
- C. Calf Stretch
- D. Hamstring Stretch

6. Which recovery stretch comes second in the sequence?

- A. Rear Lunge
- B. Overhand Arm Pull
- C. Thigh Stretch
- D. Extended Flex

7. Which PPE item is used to protect the hands from chemical exposure in Phase V?

- A. Chemical-resistant gloves approved for CBRN operations
- B. Insulated work gloves
- C. Nitrile disposable gloves
- D. Latex surgical gloves

8. Who is the Post Command Sergeant Major?

- A. CSM Kim
- B. CSM Lopez
- C. CSM Arzabala
- D. CSM Rivera

9. How should contaminated equipment be marked for decon and return?

- A. Marked with decon labels, traceability numbers, and placed in designated containers pending decon and reissue
- B. Left in place and used again if no visible damage
- C. Marked only with a color sticker indicating contamination
- D. Logged in a personal notebook without labeling

10. After addressing hemorrhage, what is the next priority in MARCH?

- A. Airway
- B. Circulation
- C. Head Trauma and Hypothermia
- D. Respiration

SAMPLE

Explanations

SAMPLE

1. Which line is part of The Chemical Corps Song's chorus?

A. We Proudly Serve the Land We're Fighting For.

B. We are the DRAGONS of the Battlefield

C. We Rule the Battle through the elements

D. DRAGON Soldiers of the Battlefield

The line that fits the chorus expresses pride in serving and a clear dedication to the country being defended. "We Proudly Serve the Land We're Fighting For" captures that collective identity and sense of purpose the chorus is meant to reinforce, using language that centers on duty, unity, and homeland. The other lines drift into fantasy imagery or generic battle talk that doesn't align with the established message of the Chemical Corps Song's chorus, which focuses on service to the land and the mission as a unit.

2. In MARCH, what does the C represent?

A. Compression

B. Circulation

C. Contusion

D. Cranial Pressure

Circulation. In the MARCH sequence, after addressing massive hemorrhage (and before finalizing airway and breathing steps), the focus is on keeping blood flowing to vital organs and stopping life-threatening bleeding. This means quickly assessing for signs of shock, applying effective bleeding control (pressure, tourniquets, hemostatic dressings), and securing IV or IO access for fluids as needed. The goal is to restore and maintain perfusion so tissues continue to receive oxygen and nutrients. Compression, while used to stop bleeding, is a technique rather than the term for this stage. Contusion refers to a bruise, not a phase in the protocol, and cranial pressure relates to head injuries rather than the Circulation step.

3. In PAWS, what does the A represent?

A. Anti-Inflammatory

B. Anesthesia

C. Airway Assistance

D. Antibiotics

In PAWS, the A stands for antibiotics because controlling bacterial infection is a universal, high-priority need in field and wartime care. Antibiotics address infection risk from wounds, contamination, and possible secondary infections, making them a core component of what PAWS aims to ensure is available. Other options—anti-inflammatory drugs, anesthesia, or airway assistance—are important in medical care but belong to different contexts or capabilities and are not the item category that the A in this mnemonic is signaling. So antibiotics best fit the letter A in this framework.

4. Who is the Vice President of the United States?

- A. Honorable Pete Hegseth
- B. Honorable JD Vance**
- C. Honorable Daniel Driscoll
- D. President Donald Trump

The Vice President is the second-in-command in the U.S. government and serves as President of the Senate, with the role of casting tie-breaking votes when needed and stepping in to assume the presidency if the current president cannot serve. The person holding that office today is Kamala Harris, serving since January 20, 2021. The names listed are public figures who do not hold the VP office, so the current Vice President is Kamala Harris, not any of the others.

5. Recovery Drills stretch #7 is which stretch?

- A. Single Leg Over
- B. Groin Stretch
- C. Calf Stretch**
- D. Hamstring Stretch

Identify which muscle group the seventh stretch in Recovery Drills targets. Stretch number seven is focused on lengthening the calf muscles—the gastrocnemius and, when you adjust knee bend, the soleus along the back of the lower leg. A common way to do it is a heel-down stance against a wall: keep the back leg straight (or slightly bend the knee to hit the soleus) and lean forward so the back heel stays on the ground, feeling a stretch in the lower leg. This clearly distinguishes it from the other options, which target different areas: a Single Leg Over focuses on hip and hamstring/inner-thigh mechanics, a Groin Stretch targets the adductors, and a Hamstring Stretch targets the hamstrings themselves. Since the seventh stretch is the calf stretch, that makes it the correct choice.

6. Which recovery stretch comes second in the sequence?

- A. Rear Lunge**
- B. Overhand Arm Pull
- C. Thigh Stretch
- D. Extended Flex

The main idea is that recovery stretches are organized in a deliberate progression, moving from a general, easy opening to more targeted work that deepens flexibility and prepares the body for the next steps. The second stretch is the rear lunge because it serves as a smooth transition from the initial general opening to more focused hip and lower-body mobility. It opens up the hip flexors and lengthens the legs in a controlled, dynamic way, setting up the body for the subsequent stretches that target the thighs and the upper body. The other options are more specific to a different region or require a different preparation phase, so they don't fit as the second movement in this sequence.

7. Which PPE item is used to protect the hands from chemical exposure in Phase V?

- A. Chemical-resistant gloves approved for CBRN operations**
- B. Insulated work gloves
- C. Nitrile disposable gloves
- D. Latex surgical gloves

Hands need a barrier that is proven to withstand chemical exposure, especially in Phase V. Chemical-resistant gloves that are approved for CBRN operations are designed and tested to resist permeation by a wide range of chemical agents and decontamination methods. They provide a reliable protective barrier, maintain integrity during handling tasks, and are rated for the specific hazards you might encounter in Phase V, ensuring both safety and compatibility with other PPE. Other glove types don't offer the same protection for chemical hazards. Insulated gloves are meant for temperature protection, not chemical resistance. Nitrile disposable gloves may offer some chemical resistance, but without a CBRN approval, they may not meet the necessary standards for prolonged or specific chemical exposures. Latex surgical gloves have limited chemical resistance and can be degraded by many solvents, plus they introduce allergy concerns.

8. Who is the Post Command Sergeant Major?

- A. CSM Kim
- B. CSM Lopez
- C. CSM Arzabala**
- D. CSM Rivera

The Post Command Sergeant Major is the senior enlisted adviser to the Post Commander, the go-to leader for all matters affecting enlisted soldiers and the NCO corps on the installation. This role includes counseling the commander, supervising standards and discipline, overseeing soldier welfare and readiness, and coordinating with higher echelons on policies that impact the post's enlisted force. In this context, the person named Arzabala holds that position, making Arzabala the Post Command Sergeant Major. The other individuals are not serving in that specific post's top enlisted slot, so they don't carry this role here.

9. How should contaminated equipment be marked for decon and return?

- A. Marked with decon labels, traceability numbers, and placed in designated containers pending decon and reissue**
- B. Left in place and used again if no visible damage
- C. Marked only with a color sticker indicating contamination
- D. Logged in a personal notebook without labeling

Contaminated equipment should be clearly identified and kept separate from usable stock so it can be properly decontaminated before it returns to inventory. Using a decon label communicates that the item requires decontamination and provides hazard and handling information. Attaching a traceability number ties the item to the decon workflow and inventory records, allowing you to track its status, dates, and responsible personnel. Placing the item in designated containers keeps all contaminated gear together and isolated, making the decon process orderly and preventing cross-contamination. Leaving equipment in place to reuse without decon is unsafe and noncompliant. A simple color sticker does not convey decon instructions or track the item through the process. Logging in a personal notebook lacks formal accountability and traceability.

10. After addressing hemorrhage, what is the next priority in MARCH?

- A. Airway**
- B. Circulation
- C. Head Trauma and Hypothermia
- D. Respiration

Securing the airway is the next priority after addressing hemorrhage. In the MARCH sequence, stopping massive bleeding comes first, but without a patent airway, you can't ventilate or oxygenate the patient, so hypoxia can develop rapidly and become life-threatening regardless of how well bleeding is controlled. So the focus immediately shifts to maintaining or establishing an open airway—checking patency, clearing obstructions, positioning the head and neck properly, suctioning as needed, and using airway adjuncts or advanced airway techniques if required. Once the airway is protected, you can then assess and support breathing, followed by circulation and other concerns.

Next Steps

Congratulations on reaching the final section of this guide. You've taken a meaningful step toward passing your certification exam and advancing your career.

As you continue preparing, remember that consistent practice, review, and self-reflection are key to success. Make time to revisit difficult topics, simulate exam conditions, and track your progress along the way.

If you need help, have suggestions, or want to share feedback, we'd love to hear from you. Reach out to our team at hello@examzify.com.

Or visit your dedicated course page for more study tools and resources:
