## **Explanations**

SAMPLE

**1. What does the expression "Two a dem is one age" suggest about two individuals?**

- A. They are from the same family**
- B. They have the same interests**
- C. They are so alike**
- D. They are best friends**

The expression "Two a dem is one age" suggests that the two individuals are very similar or alike in nature, characteristics, or mannerisms. In this context, the use of "one age" indicates a sense of shared experiences or similarities that go beyond mere friendship or familial ties. It implies that the two share a bond that makes them appear almost indistinguishable from each other in certain aspects, highlighting their likeness rather than their relationship status or personal interests. This reflects a cultural understanding of how closely people can be associated with one another through shared traits, behaviors, or a collective identity.

**2. During the era of rum running, who was the Commissioner supportive of this activity?**

- A. Hutchins**
- B. Adams**
- C. Smith**
- D. Clark**

During the era of rum running, Commissioner Hutchins was known for his support of this activity. His administration was characterized by a somewhat laissez-faire attitude towards illegal activities such as the smuggling of alcohol during Prohibition in the United States. This created an environment where rum running was both prevalent and, to some extent, tolerated, as it offered economic benefits to the local Caymanian community. Hutchins recognized the financial opportunities that could arise from this contentious trade and chose not to enforce strict regulations against it, thereby allowing the industry to flourish in the Cayman Islands during that time. The other options do not hold the same historical significance regarding support for rum running, as their administrations may not have shared Hutchins' views or approach to the enforcement of laws related to alcohol. This differentiation illustrates why Hutchins is specifically recognized in the context of rum running in Cayman history.

### 3. How many representatives were on the Vestry?

- A. 10 representatives from all districts**
- B. 5 representatives from each district**
- C. 2 representatives from 10 districts**
- D. 15 representatives total**

The Vestry was established as a governing body in the Cayman Islands, and it initially consisted of representatives who were designated to oversee local matters and engage with the community effectively. The correct answer states that there were 10 representatives from all districts, which is significant because it reflects the representation model intended to ensure that all areas of the islands had a voice in the governance process. The structure of having 10 representatives allowed for a balanced approach to governance, enabling different districts to be represented in deliberations important to local affairs. This model facilitated a more inclusive system where the various needs and perspectives of the communities could be addressed. While the other options suggest various configurations of representatives, they do not accurately reflect the historical composition of the Vestry. For instance, the suggestion of having 5 representatives from each district or 2 representatives from 10 districts does not match historical records, which confirm the role of 10 total representatives from across the districts as being essential for effective governance in the early years of the islands' development. Hence, the structure of 10 representatives from all districts was designed to balance local interests and ensure proper governance.

### 4. What is the only existing mammal in the Cayman Islands?

- A. Rats**
- B. Bats**
- C. Pigs**
- D. Goats**

The only existing mammal in the Cayman Islands is bats. Specifically, the Cayman Islands are home to the native Jamaican fruit bat, which is a significant part of the island's ecology. Bats play an essential role in pollination and seed dispersal, contributing to the health and regeneration of the islands' tropical ecosystems. Unlike the other options listed, which include introduced species or domesticated animals that have not been endemic to the islands, bats have established themselves as the sole native mammal. This unique status highlights the distinct environmental characteristics of the Cayman Islands and the importance of conservation efforts for their native wildlife.

## 5. Why did Governor Sligo travel to Jamaica in 1835?

- A. To declare the start of new trade agreements**
- B. To establish a military presence**
- C. To declare the end of slavery**
- D. To meet with the British crown**

Governor Sligo traveled to Jamaica in 1835 primarily to declare the end of slavery. This visit was significant because it was during a time of considerable change regarding the institution of slavery in British colonies. The Slavery Abolition Act was passed in 1833, leading to the gradual emancipation of enslaved individuals, and by 1838, total emancipation was planned to take effect. Governor Sligo's journey was part of the larger effort to implement these changes across the colonies, including the Cayman Islands, where slavery had also been practiced. This decision drew focus on addressing the social and economic impacts of the abolition of slavery while ensuring that the local populations and economies were prepared for this major transition. Understanding the historical context of Sligo's visit is critical in grasping the broader implications of the abolitionist movement in the Caribbean.

## 6. What is the local name for the curly tail lizard found in the Cayman Islands?

- A. Vine Lizard**
- B. Green Anole**
- C. Lion Lizard**
- D. Cayman Gecko**

This name reflects a specific recognition of the lizard endemic to the Cayman Islands, characterized by its distinctive curly tail and vibrant coloration. The curly tail lizard is known for its unique adaptations to its environment, making it an important part of the local ecosystem. While the other names listed pertain to different species or types of reptiles, they do not apply to the curly tail lizard. The term "Vine Lizard" relates to another lizard species that may not inhabit the Cayman Islands, and the "Green Anole" is primarily found in different regions, especially in the southeastern United States. The "Cayman Gecko" refers to a different genus of lizard that is also native to the islands but is not the curly tail lizard with the local nickname of Lion Lizard. Understanding the specific names and their correspondences with local wildlife enriches knowledge about the biodiversity of the Cayman Islands.

In the context of the 1932 hurricane, the loss of life was significant and reflected the perils of sailing during such tumultuous storms. Historical records indicate that the Carmina, like many vessels at the time, was unprepared for the full brunt of the hurricane, contributing to the fatalities among crew members. This tragic incident is an important moment in maritime history for the Cayman Islands, marking the resilience and challenges faced by the community during natural disasters. Understanding the specific number of crew members lost helps underline the magnitude of the disaster and its lasting effects on local history and culture.
