## **Explanations**

**1. What term describes individuals who start online purchases but do not complete them?**

- A. Abandoned cart**
- B. Shoulder period**
- C. Sales funnel**
- D. Conversion rate**

The term "abandoned cart" accurately describes individuals who initiate an online purchase by adding items to their shopping cart but do not proceed to complete the transaction. In e-commerce, tracking abandoned carts is crucial because it indicates potential lost sales opportunities. Businesses analyze this data to understand consumer behavior and enhance their marketing strategies. For instance, when a customer adds products to their cart but leaves the site, it may suggest disinterest in completing the purchase, perhaps due to high shipping costs, a complicated checkout process, or a change of mind. By identifying these factors, retailers can implement targeted strategies, such as follow-up emails or discounts, to encourage customers to return and finalize their purchases. The other terms listed do not refer specifically to this behavior. A "shoulder period" typically pertains to a time of increased consumer activity or demand. The "sales funnel" describes the stages a customer goes through before making a purchase, while "conversion rate" measures the percentage of visitors who complete a desired action, such as making a purchase, but does not specifically address abandonment. Therefore, "abandoned cart" is the correct term to focus on in this context.

**2. What is media advertisement?**

- A. Promotions targeting specific customer segments**
- B. Any advertisement using media platforms to promote products**
- C. A form of social media marketing**
- D. Advertisements restricted to print media**

Media advertisement refers to any advertisement that utilizes various media platforms to promote products or services. This includes not only traditional platforms like television and radio but also digital platforms such as social media, websites, and mobile applications. The essence of media advertisement is its broad scope, incorporating a wide range of formats and channels to reach audiences effectively. The other options do not capture the comprehensive nature of media advertisement. Promotions targeting specific customer segments can occur within media advertisements but do not solely define them. A form of social media marketing is a narrower focus, limited to social media platforms, and does not encompass all forms of media advertisement. Similarly, advertisements restricted to print media exclude other vital platforms like TV, radio, and digital channels that are integral to the concept of media advertising as a whole. Thus, the choice that best encapsulates the definition of media advertisement is the one that highlights its use across a variety of media platforms for promotional purposes.

### **3. What type of measurement is subjective and relies on interpretation?**

- A. Quantitative Measurement**
- B. Qualitative Measurement**
- C. Statistical Analysis**
- D. Descriptive Measurement**

The selected answer is qualitative measurement, which is indeed subjective and heavily reliant on interpretation. Qualitative measurement focuses on non-numerical data and aims to capture qualities, characteristics, and concepts that can be expressed in descriptive terms. This type of measurement often involves personal opinions, perspectives, and experiences, which can vary significantly from one individual to another. For instance, in the context of sports marketing, a qualitative analysis might involve gathering feedback from fans about their emotional connection to a team or event, thus emphasizing personal interpretations and insights. In contrast, quantitative measurement is rooted in numerical data and statistical analysis, producing results that can be objectively measured and compared. Statistical analysis, as the term suggests, involves examining numerical data to derive meaningful insights using mathematical tools, whereas descriptive measurement tends to summarize characteristics of a dataset without delving into complex analyses. These other options emphasize objective standards, making them less suitable when the aim is to capture subjective experiences and interpretations.

### **4. What is yield management pricing?**

- A. Setting a flat price for all products**
- B. Pricing items at different levels to optimize revenue**
- C. Offering discounts during off-peak hours**
- D. Increasing prices based on demand forecasts**

Yield management pricing refers to the strategy of pricing items at different levels to optimize revenue based on changing demand. This approach is particularly common in industries where the supply is fixed, such as airline tickets, hotel rooms, and event tickets. By analyzing customer behavior and demand fluctuations, businesses can adjust prices dynamically to maximize their revenue potential. For instance, during peak demand periods, prices might be set higher, capitalizing on customers' willingness to pay more. Conversely, during times of lower demand, prices can be reduced to encourage purchases. This strategy allows businesses to sell their available inventory more effectively rather than sticking to a one-size-fits-all price, which would not take advantage of the variations in customer willingness to pay based on timing and availability. Other options present less nuanced pricing strategies, such as setting a flat price for all products or offering discounts during off-peak hours, which don't reflect the complexity and adaptability inherent in yield management pricing. Additionally, while increasing prices based on demand forecasts can be a component of yield management, it does not encompass the full scope of pricing variations that yield management entails. Thus, the selected answer accurately captures the essence of yield management pricing.

**5. What is the term for the legal protection of words and symbols used by a company?**

- A. Trade secret**
- B. Trademark**
- C. Copyright**
- D. Patent**

The correct term for the legal protection of words and symbols used by a company is trademark. A trademark specifically refers to a word, phrase, symbol, or design, or a combination of these elements, that identifies and distinguishes the source of goods or services of one party from those of others. This protection allows companies to establish brand identity and prevent others from using similar marks that could cause confusion among consumers. Trademarks help maintain a company's reputation and allow customers to identify the quality and source of products or services. By protecting logos, brand names, and slogans, trademarks play a crucial role in brand recognition and assist businesses in building customer loyalty. While trade secrets protect confidential business information and processes, copyrights cover original works of authorship, such as literature, music, and art. Patents protect inventions and specific processes for a certain period. Therefore, when it comes to the protection of branding elements like words and symbols, trademark is the appropriate legal term.

**6. Which term refers to a cable or satellite distributor in the context of television?**

- A. Broadcaster**
- B. Content Provider**
- C. Multichannel Video Programming Distributor**
- D. Streaming Service**

The term that refers to a cable or satellite distributor in the context of television is "Multichannel Video Programming Distributor" (MVPD). This designation encompasses companies that offer multiple channels of video programming to consumers, typically through cable or satellite services. MVPDs deliver a wide range of television channels and services, enabling subscribers to access a diverse array of content, including live broadcasts, cable networks, and on-demand options. In contrast, other terms do not accurately represent the same concept. A broadcaster refers to an entity that transmits television signals over the air, typically serving local markets without the multiple-channel selection that MVPDs provide. A content provider is more focused on the creators or suppliers of the actual media content, such as movie studios or production companies, rather than the distributors that deliver it to consumers. Streaming services leverage internet technology to provide content directly to viewers but do not fit the traditional model of cable or satellite distribution as defined by MVPDs. Thus, the correct answer highlights the established role of cable and satellite distributors in the television landscape.

## 7. What best describes a viral campaign?

- A. A trend that spreads through television ads
- B. A promotion resulting in limited online mentions
- C. A promotion where few mentions create extensive comments**
- D. A campaign that focuses only on physical distribution

A viral campaign is best described as a promotion where few mentions create extensive comments. This concept hinges on the idea that a small number of shared pieces of content or messages can trigger significant engagement and discussion across a wide audience. Typically, viral campaigns leverage social media and other online platforms, where initial shares can lead to exponential spread as individuals comment, share, and engage with the content, generating a conversation that extends beyond the initial mentions. This phenomenon often occurs when the content is particularly engaging, entertaining, or thought-provoking, prompting users to react, discuss, and share it with their own networks. As a result, even limited initial exposure can lead to widespread interaction and a robust community discussion, hallmark characteristics of a successful viral marketing effort.

## 8. What is a common tactic used in prestige pricing?

- A. Offering frequent discounts
- B. Setting higher prices to reinforce quality perception**
- C. Using a cost-plus pricing strategy
- D. Conducting loss leader pricing

The correct choice highlights the strategy of setting higher prices to reinforce the perception of quality among consumers. Prestige pricing is a pricing strategy used primarily by luxury goods and services, where higher prices are established to create an impression of superior quality, exclusivity, and status. This approach is based on the idea that consumers often associate high prices with high quality; therefore, when a product is priced higher, it can enhance its perceived value in the eyes of consumers. This tactic is commonly employed in industries like fashion, automobiles, and high-end electronics, where the brand image and consumer perceptions play a critical role in purchasing decisions. By maintaining higher price points, companies can position their products as premium offerings, attracting customers who are willing to pay more for perceived value and exclusivity. Other strategies, such as offering frequent discounts, using cost-plus pricing, or conducting loss leader pricing, do not align with the principles of prestige pricing, as they either aim to drive volume through lower prices or focus on covering costs rather than creating a premium image.

## 9. What might a Marketing Information System provide?

- A. General statistics about the economy
- B. Comprehensive data on competitive pricing
- C. Specific information tailored to a target market**
- D. Consumer opinions on international laws

A Marketing Information System (MIS) is primarily designed to gather, analyze, and distribute data relevant to an organization's marketing efforts, particularly focusing on understanding target markets. The reason that specific information tailored to a target market is the correct choice is that an MIS provides insights that directly aid marketing strategies, such as consumer demographics, preferences, and buying behaviors. This specific focus on a target market allows businesses to make informed decisions regarding product development, pricing strategies, promotional tactics, and distribution channels, ultimately aligning their efforts to meet customer needs effectively. In contrast, while general statistics about the economy can be useful, they do not provide the targeted insights that are crucial for specific marketing decisions. Comprehensive data on competitive pricing is also valuable; however, it would be more related to market research rather than the tailored information that an MIS offers for direct marketing applications. Lastly, consumer opinions on international laws do not typically fall within the purview of a marketing information system's focus, as this information is not inherently relevant to marketing strategies or target market analysis.

## 10. What is a nonprice clause in marketing?

- A. A strategy focusing solely on price advantages
- B. A clause that avoids advertising altogether
- C. A focus on other factors besides price in the marketing mix**
- D. A reduction of prices to increase sales

A nonprice clause in marketing refers to emphasizing aspects of a product or service other than its price, which plays a critical role in the marketing mix. By focusing on elements such as quality, brand reputation, customer service, and unique features, marketers can differentiate their offerings from competitors and create value in the eyes of consumers. This approach helps to establish a brand's identity and fosters customer loyalty, as consumers are often willing to pay a premium for perceived quality or an emotional connection with a brand. The alternative options do not accurately represent the concept of a nonprice clause. Focusing solely on price advantages would undermine the broader strategy that nonprice clauses aim to support. Avoiding advertising altogether conflicts with the idea of promoting a product or service successfully. Lastly, reducing prices purely for the sake of boosting sales directly contradicts the concept of exploring other factors in the marketing strategy.
