## 1. What texture is swordfish typically known for?

- A. Soft and flaky
- B. Moist and meaty**
- C. Hard and crunchy
- D. Dry and tough

Swordfish is typically known for its moist and meaty texture. This quality is a result of its firm, dense flesh, which makes it an ideal choice for grilling and other cooking methods that require a robust piece of fish. The meat has a substantial feel, and when cooked properly, it retains moisture, contributing to its flavorful profile. This texture not only makes swordfish enjoyable to eat, but it also allows for various culinary applications, as it holds up well to marinades and seasonings. In contrast, the other textures mentioned do not align with swordfish characteristics. Soft and flaky textures are more commonly found in fish like cod or sole, while hard and crunchy would describe food items that are not typical for fish. A dry and tough texture would indicate overcooking or that the fish is not fresh, both of which are undesirable qualities in a well-prepared swordfish dish. Therefore, the moist and meaty texture is what makes swordfish a popular choice among seafood enthusiasts.

## 2. How are the wings served when ordering?

- A. Tossed in sauce
- B. Not tossed**
- C. With a dipping sauce
- D. Sauced on the side

When wings are ordered "not tossed," it typically means that they are served plain, without any sauce coating them. This presentation allows diners to enjoy the chicken's natural flavor or to control how much sauce they want to add themselves later. Offering wings in this manner can cater to various taste preferences, making it a popular choice for those who may not prefer the added flavor of sauces or for those who wish to customize their meal. This option stands out because serving wings not tossed maintains their original taste and texture, which some may find preferable. Additionally, it provides the opportunity for patrons to enjoy wings in conjunction with the dipping sauces of their choice, enhancing the meal experience by allowing for personal customization.

### 3. What is the new sandwich on the menu this year?

**A. Smoked Whitefish BLT**

**B. Grilled Mahi-Mahi Burger**

**C. Classic Lobster Roll**

**D. Blackened Tuna Melt**

The Smoked Whitefish BLT is a standout choice as the new sandwich on the menu this year because it introduces a unique flavor combination that blends the classic elements of a BLT (bacon, lettuce, and tomato) with the distinct smokiness of whitefish. This innovative twist appeals to those looking for something different while maintaining the familiar comfort of a traditional BLT. Additionally, the use of smoked whitefish adds a layer of complexity and sophistication, making it an attractive option for diners who appreciate creative seafood dishes. The other options, while delicious in their own right, are not new to the menu this year, potentially offering flavors and experiences patrons may have already encountered. This makes the Smoked Whitefish BLT a fresh and exciting offering that stands out from the rest.

### 4. What is the primary purpose of a health check in Docker?

**A. To monitor network traffic**

**B. To determine if an application is running correctly**

**C. To manage container storage**

**D. To optimize resource allocation**

The primary purpose of a health check in Docker is to determine if an application is running correctly. Health checks are critical for ensuring that containers are operating as expected. They enable the Docker engine to monitor the health of running applications inside containers and can take specific actions based on the results of these checks. By defining a health check in the Dockerfile or the Docker Compose file, you can specify a command to run that will test the application's functionality. If the health check fails, Docker can automatically mark the container as unhealthy, allowing for proactive measures such as restarting the container or adjusting load balancing to ensure that traffic is directed away from unhealthy instances. This capability plays an essential role in maintaining application reliability and uptime, especially in production environments where continuous operation of services is critical.

### 5. What is the upcharge for adding bacon to a burger?

**A. \$1**

**B. \$2**

**C. \$3**

**D. \$4**

When considering the pricing for adding bacon to a burger, it's common for establishments to have a standard upcharge for extra ingredients. In this case, the charge of \$2 for bacon is a reasonable amount reflecting the cost of the ingredient and preparation. Restaurants often assess their prices based on food costs, preparation time, and customer willingness to pay. A \$2 upcharge suggests that it is an affordable addition that many customers would find reasonable, aligning with typical pricing structures in the food industry. By offering bacon as an add-on at this price, the restaurant can attract customers who enjoy this popular topping without making it prohibitively expensive. This pricing strategy encourages upselling while also increasing overall customer satisfaction by providing customizable options.

**6. Which appetizer is recommended for those who enjoy vegetables?**

**A. Loaded Fries**

**B. Hot Honey Crispy Brussels Sprouts**

**C. Mussels**

**D. Lobster fondue**

The recommended appetizer for those who enjoy vegetables is Hot Honey Crispy Brussels Sprouts. This dish prominently features Brussels sprouts, a popular vegetable known for its distinct flavor and health benefits. The preparation typically involves frying or roasting the Brussels sprouts to achieve a crispy texture, and the addition of hot honey provides a sweet and spicy contrast that enhances the vegetable's natural taste. This makes it a great choice for vegetable lovers, as it not only highlights the Brussels sprouts but also presents them in a unique and flavorful way that appeals to a wide range of palates. Other options, while they may be delicious, do not center around vegetables—loaded fries are primarily potato-based, mussels focus on seafood, and lobster fondue centers on shellfish. Therefore, the Hot Honey Crispy Brussels Sprouts stands out as the most vegetable-centric appetizer.

**7. What is the main ingredient in the restaurant's chowder?**

**A. Chicken**

**B. Beef**

**C. Clams**

**D. Vegetables**

The main ingredient in chowder is typically clams, which is why the correct answer is clams. Chowder, especially the popular New England style, is a creamy soup that is traditionally made with clams, potatoes, and other seasonings. Clams provide a distinct flavor that defines the dish, making them the primary component that distinguishes chowder from other types of soups. While chicken, beef, and vegetables can be used in various types of soups, they do not represent the classic or most recognized version of chowder, which centers around the use of clams. The essence of chowder comes from the combination of clams and cream or broth, highlighting the importance of clams in this dish.

## 8. What type of data is typically stored using Docker secrets?

- A. Configuration files
- B. Source code
- C. API keys and passwords**
- D. Container images

Docker secrets are specifically designed to manage sensitive data such as API keys, passwords, and tokens securely within a Docker swarm. The primary goal of using Docker secrets is to keep this sensitive information out of the source code and configuration files, thus minimizing the risk of exposure in the plaintext format. When a secret is created in Docker, it is stored in the swarm manager and can be used by services in the swarm without being exposed to the system directly. This approach ensures that only the services that require access can retrieve the secrets, enhancing security. The other types of data mentioned, such as configuration files and source code, do not fall under the specific use case for secrets. Configuration files might contain sensitive information but are generally not managed as Docker secrets. Similarly, source code, while it may house sensitive information inadvertently, is not specifically designed for policy-controlled access to secrets. Container images represent the deployed application and its dependencies, but again, they do not serve the purpose of securely handling sensitive data like passwords and API keys do.

## 9. How is the flavor of piccata often described?

- A. Spicy and robust
- B. Savory and rich
- C. Bright and tangy**
- D. Heavy and creamy

The flavor of piccata is often described as bright and tangy due to its characteristic ingredients. Traditional piccata dishes, particularly those made with chicken or veal, typically include a sauce made from lemon juice, capers, and white wine. The lemon juice adds a refreshing acidity, while the capers contribute a briny punch, both of which enhance the dish's overall brightness and tanginess. This combination of flavors creates a lively and zesty profile that is distinctively associated with piccata. In contrast, the other options reflect different flavor profiles that do not align with the essence of piccata. For instance, descriptions involving spice or robustness might pertain more to dishes influenced by spices, and savory and rich flavors are often found in cream-based sauces. Heavy and creamy indicates a texture and taste profile that is not characteristic of the light, citrus-forward nature of piccata. Thus, "bright and tangy" accurately encapsulates the quintessential flavor experience of this classic dish.

**10. How many shrimp are included in the red beans and rice dish?**

- A. 3**
- B. 4**
- C. 5**
- D. 6**

The red beans and rice dish often includes a specified number of shrimp to provide a balance of flavors and texture within the meal. In this instance, five shrimp have been designated as the standard amount. This quantity is typical enough to complement the beans and rice without overwhelming the dish, allowing for that delightful combination of tastes and a well-rounded meal. Furthermore, a chef may choose five shrimp to ensure that each serving remains visually appealing and satisfying, making it a common culinary practice to use that specific number. The choices reflecting three, four, or six shrimp might either be lower than typical serving sizes or not as commonly used in traditional recipes, which usually aim for that "just enough" approach with five shrimp as an ideal number for presentation and enjoyment.
