## **Explanations**

SAMPLE

**1. Which branch of law is created by federal and state administrative agencies?**

- A. Criminal law
- B. Administrative law**
- C. Civil law
- D. International law

*Administrative law is the correct answer because it encompasses the rules and regulations enacted by federal and state administrative agencies. These agencies are established by legislatures to implement and enforce specific statutes that govern various sectors, such as environmental protection, labor relations, and health care. Administrative law provides the framework within which these agencies operate, detailing how they create regulations, the procedures they must follow, and how they enforce their rules. In contrast, criminal law deals with offenses against the state or public, civil law pertains to the rights of individuals and the legal responsibilities in conflicts between them, and international law governs relations between countries and international entities. Each of these branches serves distinct purposes and is governed by different principles and regulations, making administrative law unique to the functioning of government agencies and their authority.*

**2. What refers to a negative attitude towards others based on their gender, religion, race, or group membership?**

- A. Discrimination
- B. Bias
- C. Prejudice**
- D. Stereotyping

*The correct answer is rooted in the concept of forming preconceived opinions or judgments about individuals or groups, often without knowledge or actual experience. Prejudice specifically refers to a negative attitude or belief directed at an individual or group based on characteristics such as gender, religion, race, or group membership. It encapsulates feelings of hostility, disdain, or inequality stemming from these attributes, leading to a lack of understanding or empathy for those who are different. While the other terms like discrimination, bias, and stereotyping have their distinct meanings, they do not precisely capture the essence of a negative attitude in the same way. Discrimination refers to actions or behaviors that result in unequal treatment of individuals based on their group identities. Bias might indicate a tendency to favor a particular view or group over another, but it does not always imply a negative stance. Stereotyping involves oversimplified and generalized beliefs about a group, which could lead to prejudicial attitudes but is not itself the attitude. Thus, prejudice is the overarching term that encompasses negative feelings towards others based on inherent characteristics, distinguishing it from the more action-based or thought-based distinctions presented in the other answer options.*

### 3. What is the purpose of a burial vault?

- A. To store cremated remains
- B. To serve as a decorative feature
- C. To prevent grave robbery**
- D. To act as a memorial

*A burial vault primarily serves the purpose of protecting caskets from the weight of the earth and other elements. By creating a sealed environment, a burial vault prevents grave robbing by deterring unauthorized access to the casket and its contents. This protective measure not only secures the integrity of the burial site but also helps maintain the appearance of the grave over time, reducing the likelihood of cave-ins or sinking ground. While vaults can often feature decorative components that may contribute to the overall aesthetic of a gravesite, this is not their primary function. Furthermore, storing cremated remains is not relevant in this context since cremation involves a different approach to handling remains. Similarly, while a burial vault might contribute to memorial aspects, that is not its core purpose compared to the vital role it plays in ensuring the security and preservation of a traditional burial.*

### 4. What is a recess or compartment in a columbarium used for placing cremated remains called?

- A. Crematorium
- B. Niche**
- C. Vault
- D. Sepulcher

*A recess or compartment in a columbarium designed for placing cremated remains is referred to as a niche. This term specifically describes the individual spaces within a columbarium where urns holding cremated remains are stored. Niches are often designed to hold one or more urns and may be personalized with inscriptions, photographs, or other memorial elements, allowing families to honor their loved ones in a dedicated space. Other terms like crematorium refer to the facilities where the cremation process takes place, while a vault generally refers to a covered grave or a burial chamber rather than a specific compartment for cremated remains. Similarly, a sepulcher can denote a tomb or burial chamber but does not specifically refer to the niche configuration used in a columbarium. Understanding these distinctions clarifies why "niche" is the accurate term for this particular context.*

**5. What is the term for the act of valuing property and listing its assets during probate?**

- A. Fiat
- B. Appraisal
- C. Inventory**
- D. Assessment

*The term for the act of valuing property and listing its assets during probate is "Inventory." This process is crucial in a probate scenario as it involves compiling a detailed list of all the deceased individual's assets, including their value at the time of death. An inventory serves several key purposes: it provides a clear picture of the estate's worth, helps determine the beneficiaries' shares, and facilitates the settlement of debts and taxes owed by the estate. While "Appraisal" may also seem related, it specifically refers to the process of assessing the value of a particular asset rather than the broader act of listing and documenting all assets in the estate. Similarly, "Assessment" can refer to a valuation process, typically for taxation or regulatory purposes, but does not encompass the comprehensive compilation that an inventory represents. "Fiat" is unrelated in this context, as it refers to an authoritative decree rather than a process of asset evaluation. Overall, the complete and organized nature of an inventory is essential for the efficient administration of an estate during probate.*

**6. What term describes the principles of right and wrong that govern individual behavior?**

- A. Personal ethics**
- B. Situational ethics
- C. Business ethics
- D. Culture

*The term that describes the principles of right and wrong governing individual behavior is personal ethics. Personal ethics refer to the values, virtues, and moral principles that an individual holds, which guide their decisions and actions in various situations. These ethics are shaped by one's upbringing, culture, experiences, and beliefs, and they play a crucial role in how individuals perceive right and wrong conduct. In contrast, situational ethics focuses on the context of a situation rather than strict moral rules, allowing for flexibility based on specific circumstances. Business ethics relates to the moral principles guiding behavior in a business environment, and culture refers to the collective beliefs and values of a group or society, which can influence but are not synonymous with individual behavior. Understanding personal ethics is vital as they reflect an individual's commitment to making morally sound choices in their everyday life.*

**7. What term is used to describe the act of one human being killing another?**

- A. Homicide**
- B. Manslaughter
- C. Assault
- D. Murder

*The term used to describe the act of one human being killing another is "homicide." Homicide encompasses all instances where one person causes the death of another, whether it is intentional or due to reckless behavior, and can include a variety of circumstances and legal distinctions. Manslaughter refers to a specific type of homicide that generally implies a lack of premeditation and is often characterized by circumstances that might mitigate culpability, such as provocation or lack of intent to kill. Murder, on the other hand, usually involves intent and is classified as a more serious offense as it often includes premeditated actions or malice aforethought. Assault is fundamentally different as it pertains to the act of causing apprehension of harmful or offensive contact, rather than resulting in death. Therefore, while all these terms relate to acts of violence, "homicide" is the broad and inclusive term that accurately captures the act of one person killing another.*

**8. Which of the following describes the material known as a polymer?**

- A. Highly flexible and elastic substance
- B. Sturdy and durable material usually resembling plastic**
- C. Low-density and lightweight compound
- D. Fragile and brittle substance

*Polymers are large molecules composed of repeating structural units, typically connected by covalent chemical bonds. The characteristic that most accurately describes polymers is their sturdy and durable nature, which is commonly associated with materials that resemble plastic. Many polymers exhibit qualities such as strength and stability, making them useful in a wide range of applications, from everyday items to specialized industrial products. While polymers can indeed be flexible and elastic, the defining feature of many is their robustness, suitability for various environments, and ability to maintain utility over time. This durability often leads to the polymer being used as a material that will withstand stress without deforming easily, making it particularly advantageous in many applications. The other options describe characteristics that may apply to specific types of materials but do not universally define polymers as a class. For instance, while some polymers can be low-density and lightweight, not all are, and the same goes for flexibility and fragility. Thus, the emphasis on sturdiness and durability resonates best with the general description of polymers.*

**9. What role does a marker play in a cemetery?**

- A. To indicate ownership of the plot
- B. To provide information about grave maintenance
- C. To identify individual graves**
- D. To commemorate an anniversary

*A marker in a cemetery plays a crucial role in identifying individual graves. It serves as a physical emblem that indicates who is buried in a specific location, often displaying the name, birth date, and death date of the deceased. This identification is vital for family members and friends visiting the site, as it allows them to locate their loved ones easily among potentially hundreds or thousands of graves. Markers also reflect the importance of remembrance in funerary practices, as they create a tangible connection between the living and those who have passed away. While it is true that markers can sometimes signal ownership of the plot or can provide information about the maintenance of a grave, their primary and most significant function remains the clear identification of individuals resting in the cemetery.*

## 10. What role does a reader serve in the Church of Christ, Scientist?

- A. Administrator of the church
- B. Preacher
- C. Authorized to read lessons and scripture
- D. Counselor

*In the Church of Christ, Scientist, a reader serves the essential role of being authorized to read lessons and scripture during services. This involves reading selections from the Bible and from the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, as well as additional materials that are part of the Church's spiritual service. Readers play a significant part in communicating the teachings and tenets of Christian Science to the congregation, allowing members to engage with the texts that define their faith. This role is vital for the worship experience and helps to foster understanding and spiritual growth within the community. While administrators may manage church operations and counselors provide personal guidance, these roles are distinct from that of the reader. Preachers typically deliver sermons and interpret scripture, which is not the practice within this church as it emphasizes individual study and understanding of the scripture through readings rather than sermons. Therefore, the reader's function is focused specifically on the pronouncement of sacred texts, making this the correct answer for the role defined in the question.*
