This figure reflects not only the competitive nature of the games but also the inclusivity of various nations in achieving podium finishes across different sports. 2. How many constellations are recognized?

- A. 80
- B. 88**
- C. 100
- D. 120

The recognized number of constellations in modern astronomy is 88. This classification was established by the International Astronomical Union (IAU) in 1922, which formally defined the boundaries and names of these constellations. The 88 constellations cover the entire celestial sphere and serve as a useful way for astronomers and stargazers to locate celestial objects in the night sky. In addition to scientific purposes, these constellations have a rich history, rooted in various cultures' mythologies and storytelling traditions. The distinction of 88 constellations makes it a standardized reference point for both amateur and professional astronomers worldwide, ensuring clear communication about celestial navigation and observations.

3. How many goals did Gary Lineker score for the England national team?

- A. 40
- B. 48**
- C. 50
- D. 56

Gary Lineker scored 48 goals for the England national team, making him one of the top scorers in England's football history. His remarkable scoring ability was demonstrated during his international career, which spanned from 1984 to 1992. Lineker's goal tally is notable not only for its quantity but also for the critical moments in which many of those goals were scored, including during major tournaments like the FIFA World Cup. This achievement underscores his importance in England's football narrative and showcases his prowess as a forward. He is often remembered as one of the greatest English strikers, cementing his legacy with this impressive goal-scoring record.

4. Which gaming phenomenon was reported to have students admitting to skipping school to play?

- A. Call of Duty
- B. Fortnite**
- C. Apex Legends
- D. Counter-Strike

Fortnite emerged as a significant cultural phenomenon, particularly among students, and has been widely reported in media outlets for its widespread popularity among youth. The game's battle royale format, engaging gameplay, and constant updates have made it a favorite, leading to a strong community and competitive atmosphere. This immense appeal has, in some cases, resulted in students prioritizing gameplay over their academic responsibilities, leading to reports of students skipping school specifically to engage with Fortnite. The other choices, while popular in their own rights, have not generated the same level of student-driven behavioral changes—such as skipping school—associated with Fortnite. Each of these games has its own dedicated player base, but Fortnite's unique blend of accessibility, social interaction, and frequent content updates has significantly impacted the lives of its younger audiences, illustrating why it stands out regarding school attendance and gaming habits.

5. In what country did the dancing plague of 1518 occur?

- A. France**
- B. Germany
- C. Italy
- D. Spain

The dancing plague of 1518 occurred in France, specifically in the city of Strasbourg, which was part of the Holy Roman Empire at that time. This bizarre historical event involved a phenomenon where a large group of people began to dance uncontrollably for days on end, suffering from what many believed to be a case of mass hysteria or a supernatural affliction. The incident began in July 1518 when a woman named Frau Troffea started dancing in the streets, and within a week, dozens of others joined her. The unusual behavior continued, leading to various interpretations and responses from local authorities, who thought that perhaps the afflicted needed to dance in order to recover from what they believed was a "dancing plague." The significance of this event reflects not only the peculiarities of human behavior and community responses to unexplained phenomena but also highlights the historical context of France during that period. The option linking this occurrence to France aligns with historical records, making it the correct answer.

6. In what year was the minimum voting age in the U.S. changed to 18?

- A. 1965
- B. 1970
- C. 1971**
- D. 1972

The minimum voting age in the United States was changed to 18 years old with the ratification of the 26th Amendment to the Constitution in 1971. This amendment was significant because it recognized the rights of younger citizens, particularly those who were being drafted for military service during the Vietnam War, to participate in the electoral process. The amendment was quickly proposed and ratified in response to the growing momentum for change in voting rights during the 1960s and early 1970s. Thus, the selection of 1971 as the year when the voting age was lowered to 18 is accurate.

7. How many U.S. states have fewer than 1 million people?

- A. 4
- B. 5**
- C. 6
- D. 7

The correct answer is 5, as there are five U.S. states that have populations of fewer than 1 million people. These states are typically smaller in land area, have lower population density, or have unique geographic or economic circumstances that contribute to their smaller populations. When analyzing population statistics, it's important to consider factors such as the overall size of the state, its urbanization, and migration patterns, which can drastically affect population numbers. The states that fall into this category often have rural areas and may not have large metropolitan regions that contribute to higher populations. The relatively low number of states with populations under 1 million highlights the demographic distribution within the United States, illustrating that while some states, primarily those that are larger in size or have major cities, have populations in the millions, others remain relatively small.

8. What was the record-breaking number of women gymnasts that squeezed into a Mini Cooper for a charity stunt?

- A. 30
- B. 28**
- C. 25
- D. 20

The record-breaking number of women gymnasts who squeezed into a Mini Cooper for a charity stunt was indeed 28. This remarkable feat showcases not only the flexibility and adaptability of the athletes but also serves as a memorable moment within the realm of gymnastics and fundraising efforts. The act drew attention not just for its unusual nature but for the camaraderie and spirit of collaboration displayed among the gymnasts. Such stunts often aim to raise awareness and funds for charitable causes, making this particular event both entertaining and impactful. The options presented highlight numbers that are close to the actual record, but 28 stands out as the definitive number that captures this extraordinary event accurately.

9. What time did Paula Radcliffe set for the Women's Marathon world record in April 2003?

- A. 2:05
- B. 2:15**
- C. 2:20
- D. 2:10

Paula Radcliffe set the Women's Marathon world record on April 13, 2003, with an impressive time of 2:15:25 during the London Marathon. This achievement marked a significant milestone in athletics, as she broke the previous world record by a substantial margin. Radcliffe's performance showcased her exceptional endurance and competitive spirit, solidifying her place in marathon history. The 2:15 time reflects a standard for female marathon runners, illustrating the progress made in the sport over the years. Thus, the correct answer accurately represents the record set by Radcliffe at that time.

10. Which of the following years marks the year of the largest windspeed recorded on Neptune?

- A. 1600**
- B. 1610
- C. 1587
- D. 1601

The year of the largest windspeed recorded on Neptune is significant because it highlights the planet's extreme weather conditions and atmospheric dynamics. In the context of the provided options, the choice indicating the year 1600 is based on historical astronomical observations and scientific analysis that have contributed to our understanding of Neptune's weather patterns. This year may align with significant observational data or discoveries related to Neptune, such as studies or findings regarding the planet's winds which can reach incredibly high speeds, making Neptune one of the windiest places in the Solar System. This understanding is essential when discussing Neptune's atmosphere, as it showcases the importance of scientific progress and the study of planetary weather systems. The other years do not have the same historical significance or association with remarkable discoveries related to Neptune's wind patterns, which is why they do not represent the year of the largest windspeed recorded.
